Job Application for Software Development Manager

To Whom it May Concern,

Please find enclosed my resume, which outlines my relevant experience for this position, as well as my education. I am an experienced Software Engineer with a demonstrated history of working in e-commerce, operations, and cloud computing. I am skilled in Software Architecture, Technical Writing, Software Development, and hold a Bachelor's degree focused in Computer Engineering from Drexel University. I have gained over nine years of experience working with a full stack of web technologies and general back-end computing platforms. Over the course of my career I have had the opportunity to gain a great deal of experience writing technical reports and documenting software architecture. I have lead several teams through various projects, seen multiple projects go from idea to production under my supervision, and mentored numerous junior team members in their project goals. I consider myself a well rounded programmer with a focus on real world software applications that contribute to advancing productivity and business goals of the company or client for which I am working. I believe that any team I am given the opportunity to work with will find that I am a dedicated employee who looks for the best solution to any problem.

Sincerely,

John Ailor
