Job Application for Software Development Manager

To Whom it May Concern,

Find enclosed my resume, which outlines my relevant experience for this position, and education. I am an experienced Software Engineer with a demonstrated history of working in e-commerce, operations, and cloud computing. I am skilled in Software Architecture, Technical Writing, Software Development, and hold a Bachelor's degree focused on Computer Engineering from Drexel University. I have gained over ten years of experience working with a full-stack of web technologies and general back-end computing platforms. Over the course of my career, I have gained a great deal of experience writing technical reports and documenting software architecture. I have led several teams through various projects, and seen multiple projects go from concept to production under my supervision. On numerous occasions I have mentored team members in their project goals. I am a well-rounded programmer with a focus on software applications that contribute to advancing productivity and business goals of the company or customer. Any team I am given the opportunity to work with will find a dedicated employee who looks for the ideal solution to every problem.

My current career goals are aligned with moving towards a people management role in a technical space. This will help to expand the breadth of skills, while using my existing management style and techniques to drive innovation. Throughout my career, I have focused on capability building, for both technical solutions, and technical employees. As a Senior engineer, I work closely with Software developers, stakeholders, and leadership to persistently push for innovative solutions with capabilities beyond the momentary needs. As a Software Development Manager, the opportunities to expand on my force multiplying effect, and drive innovation will continue to expand.

As a current employee of Amazon, I know that the Amazon team, and company culture are what allow them to strive for innovation. The culture within the Amazon, inspires employees to strive for the best. Software Development Teams at Amazon are truly unsurpassed in the ability to work as a software innovation leader, while giving the environment of an innovative start-up. Within every position, there is room for growth and opportunity, from a career perspective, and from the perspective of innovation. Lessons learned within the truly fast-paced development groups inform my ongoing decisions. I look forward to continuing my journey at Amazon in an SDM role where I am able to innovate and drive innovation.

Sincerely,

John Ailor
